CSS MicroSystems GmbH

The Passionate Assistive Technology Manufacturer

CSS MicroSystems develops, manufactures and distributes digital solutions for environmental control, assistive call systems for clinics and care, and assistive computer access and control.

As a company we are dedicated to using cutting edge technology in a meaningful way. This dedication, combined with our specific expertise in the interface and interaction between people with severe and complex disabilities and conditions, enables us to deliver market leading award-winning devices.

Our work is based on many years of experience with technology for people with disabilities and complex needs. CSS MicroSystems was originally founded out of the specific need for electronic aids in our local area. Creativity and enthusiasm for this requirement has enabled us to develop innovative products that are now being sold to an expanding worldwide client base.

A skilled team of engineers convert theoretical ideas into practical solutions in our state-of-the-art Research & Development department. Our own factory in Weinsberg always ensures the highest quality of our products, and we are proud of the label Made in Germany. Our users, specialist resellers and project customers benefit from the flexibility of our production and quality control, utilising advanced machines and techniques for electronics manufacturing, mechanics and additive manufacturing.

CSS MicroSystems GmbH is an MFi manufacturer licensed by Apple. We are one of the few companies in Europe that are authorized to manufacture devices and accessories for use with iPad and iPhone.

CSS is also active and integral in supporting the goals of industry associations (BEH, DATEurope, ATIA) and advocates digital assistive technology for people with disabilities.
