RemoBIF

Assistive Bed Control

Adjusting the care bed independently:
By pressing buttons, by sip & puff, by speaking
or with eye & head control

RemoBIF

Assistive Bed Control

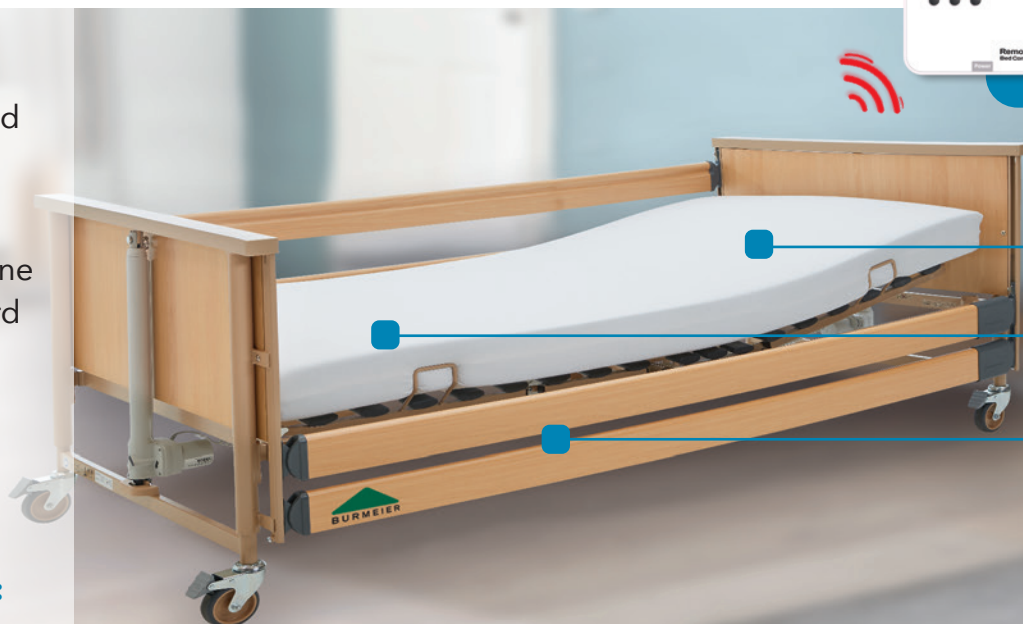

BED CONTROL FOR ALL!

Being able to adjust the care bed independently is a big step to more quality of life.

RemoBIF solutions help everyone who cannot operate the standard handset.

RemoBIF solutions are simple and flexible to mount to the care bed.

RemoBIF solutions at a glance:

RemoBIF

Universal bed control interface for **Infrared** & **Easywave** radio (example: for the „Dali“ care bed from Burmeier, but also available for many other care beds)

With **RemoBIF** these functions are adjustable (up and down):

The backrest

The footrest

The bed height

RemoBOW

By pressing buttons

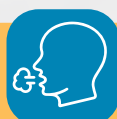

With **RemoBOW** it is possible to operate the bed with big buttons. The backrest and footrest can be adjusted by simply pressing these buttons. An **AssistX Call System** and switching a lamp on and off can be integrated.

RemoAIR

By sip & puff

With **RemoAIR** it is possible to move the backrest of the care bed up and down with a sip and puff switch and a flexible mouthpiece. An **AssistX Call System** can also be integrated.

RemoSPEAK

By speech control

With **RemoSPEAK** it is possible to control the bed with simple voice commands. The backrest and footrest as well as the bed height can be adjusted. An **AssistX Call System** and switching a lamp on and off can be integrated.

With eye & head control

Using a communication device, it is possible to operate the care bed with eye or head movements. The backrest and footrest are adjustable. An **AssistX Call System** and switching a lamp on and off can be integrated.
